

## **QUNDIS Company Profile**

### **Innovation rooted in tradition**

For over 30 years now QUNDIS GmbH has been a pioneer in the development of systems for recording consumption data. Our products are focused decisively on the requirements of our customers. System solutions 'Made by QUNDIS' help to measure and analyse energy consumption and ensure responsible use of scarce resources.

### **Leading in Germany and in Europe**

In Germany and many European countries the QUNDIS Group is a leading supplier of measuring devices and readout systems for consumption-based billing of water and heating costs. Our devices are now in operation within more than 30 countries, where they are installed in over 6 million residential units. Our customer base includes service companies and OEM partners to the housing industry.

### **Bringing together the best**

QUNDIS was created in 2009 by a merger between the long-established companies of QVEDIS (previously Siemens) and KUNDO SystemTechnik. Our company is driven by our workforce of approx. 300 highly qualified specialists, who contribute the know-how and innovative skills which ensure our technological leadership of QUNDIS.

In 2014 QUNDIS received the award of 'Top Innovator' at Germany's Mid-sized Company Summit. Its position among the leading three companies in Germany's TOP 100 confirms QUNDIS as one of the country's most innovative pioneers.

### **Open systems ensure your independence**

Precise data recording and secure data transmission form the focus of our operations. The open QUNDIS systems enable the integration of OMS standard devices from a range of manufacturers. This enables us to provide our customers with the maximum flexibility and independence. In future the data can also be made available via the QUNDIS smart metering platform (Q SMP). This high-performance hosting solution simplifies utility cost billing, analyses and monitoring functions.
